OneVision's new Asura Balance: Increase your Efficiency with Improved Management of multiple Asuras

Asura Balance is the perfect add-on for automated file control and correction with multiple Asuras. Depending on respective workloads, print jobs are automatically assigned to individual Asuras which optimizes the available file check and correction capacity. A new program structure and user interface offers comprehensive, detailed information with simple user instructions.

Regensburg, Germany (December 12, 2006) – OneVision Software AG, one of the leading suppliers of innovative software solutions for the print and media industry, offers Asura Balance to adjust workload peaks of multiple Asura servers. Asura Balance provides intelligent load balancing which distributes the jobs individually to the earliest available Asura. Before assigning the job, Asura Balance verifies the actual status of the Asuras in the network thereby avoiding capacity overloads and delays.

The focus of the new Asura Balance has been on faster and easier configuration and control of the different Asura servers. The enhanced configuration of the different queues and hotfolders has been combined in one simplified User Interface. The new color coding quickly shows the status of different Asuras. Additionally, the user is provided with a detailed overview about amount and size of processed files and a comprehensive log report showing which job has been processed with which Asura and the respective queue.

Editor's Notes

About OneVision

OneVision Software AG develops and implements innovative software solutions and concepts aimed at optimizing workflows in print and media production – assisting its clients in improving speed and quality of their workflows, saving time and expense.
