New interactive Preflighting in Solvero: Significant time saving with error correction through the comprehensive collaboration between OneVision's new Asura and Solvero version 8.1

Asura, OneVision's solution for automated Preflighting of files in PDF, EPS and PostScript formats, is able to generate a direct editable PDF Error Report File which shows the detected problems and the elements that error on different layers. The new interactive Preflight Check in Solvero allows the same controlled preflight of the file as Asura while it's open in the editing software. The same settings for preflight of the PDF, EPS or PostScript file can be used in both Asura and Solvero, so delays and possible sources of error can be reduced even further.

Regensburg, Germany (December 12, 2006) OneVision Software AG, one of the leading suppliers of innovative software solutions for the print and media industry, contributes with its latest version 8.1 of Asura and Solvero to significant time saving and cost reduction in prepress. This new version is focused on the optimisation of the interaction between Asura and Solvero and their swappable options.

Asura is OneVision's software solution for automated control, correction and optimisation of production files in PDF, EPS and PostScript format. Since the previous version, the error report can be generated into a directly editable PDF file which displays the problems or error elements as separate layers. This allows quick detection error detection without time consuming search.

Solvero is OneVision's accordant software solution for editing and correction of data files in the PDF, EPS and PostScript formats. Corrections can be made directly to the PDF error report file which has been generated by Asura. The new interactive Preflight Check in Solvero 8.1 enables immediate control of the file quality without generating another PDF file and sending it through Asura. Eventual remaining or even new errors can be detected without loss of time.

New interactive Preflighting in Solvero

Asura can now import and use the check settings of Solvero and vice versa. Production files can now be controlled corrected and exported the same way in both products. This allows eliminating a considerable source of error of the manual correction and post-editing as well as saving a significant amount of time.

The configuration of Asura's PDF Error Report was enhanced that way that the focus can either be set on a most detailed identification of error or problem elements or on creating a most compact PDF file.

Contrary to its first version, the PDF Error Report can now detect also errors which can not directly be assigned to specific elements in the files such as "wrong PDF level" or "wrong PostScript level".

Editor's Notes

About OneVision

OneVision Software AG develops and implements innovative software solutions and concepts aimed at optimizing workflows in print and media production – assisting its clients in improving speed and quality of their workflows, saving time and expense. Corporate headquarters are located in Regensburg, Germany. OneVision Software AG, also has subsidiaries in Jersey City (New Jersey, USA), in Milton Keynes (United Kingdom), in Levallois-Perret (France) and in São Paulo (Brazil), as well as a branch office in Copenhagen (Denmark). OneVision's customers include leading newspaper & magazine publishers, commercial printers, prepress companies, advertising agencies, and industrial enterprises. Founded in 1994, OneVision today is one of the world's leading suppliers of software technologies for print and media production. OneVision's quality management system is certified based on ISO 9001:2000 standards.

About OneVision Asura

Asura is the leading automated software solution for hotfolder-based control, correction and optimization of files in PDF, PostScript, EPS or TIFF format. Asura automatically takes over document 'prefining', examining file contents, correcting errors on the fly, and providing a detailed log report for each document. Operating in the background Asura does not require any manual operation on the data, preventing insecure documents from burdening workflows in print and media production.

About OneVision Solvero

Setting new standards in high-quality print and media production Solvero is One Vision's editing and post-processing application for PDF, EPS or PostScript documents. Its functionality goes far beyond the capabilities of simple PDF editors. Regarding production issues Solvero measures up to the feature set of modern layout programs – such as text flow and typography as well as color management and adjustment or positioning and processing of graphic elements and images. Solvero integrates all the functionality for a last-minute check and edit into one application.
