### OneVision Introduces Amendo Perfect Skin

*New feature for OneVision's renowned Image Enhancement Software achieves amazing skintone corrections*

**Regensburg, Germany – March 01st, 2011** – OneVision, a global provider of prepress and premedia software solutions to the printing and publishing industries, has announced the availability of new features for its innovative image enhancement solution, Amendo.

The new software version comes with an improved user interface, offers new options for the handling of file extensions, and supports additional file formats such as PNG or RAW.

One new feature in particular deserves special attention: with this new version of Amendo, OneVision is introducing **Amendo Perfect Skin**. This unique feature works on a sophisticated methodology: a brand-new face detection techniques is used which reliably recognizes faces, analyzes their skin tones and executes any required corrections in order to achieve the "Perfect Skin" – all while preserving the characteristics of the different complexions. As a result, the skin tones look very natural and realistic, and the quality of the overall picture is greatly enhanced.

Furthermore, the new version offers:

- **Minimum / Maximum Dot Value:** This feature now has the option to apply the minimum dot settings to the border area only, thus helping to preserve as much detail as possible in the central part of the image.
- **Paper Simulation:** An industry's first, Amendo users have now the possibility to view CMYK and greyscale images with a paper simulation.

- **Improvements for Highlight and Shadow Correction:** The highlight and shadow features have been revised and now only effect the quarter and three-quarter tone areas respectively.

### **About Amendo**

Amendo is OneVision's image color correction engine that can automatically improve image quality and output perfect images for print or web to a customer's individual requirements. With its intuitive and easy to use interface, Amendo provides printers and publishers with professional-quality image enhancement and color correction that can significantly reduce the time and effort needed to process photos and images.

OneVision's Amendo sets standards in image enhancement: rather than modifying an entire image, Amendo adjusts individual image elements therefore obtaining even better results. Amendo improves contrast, shadow and highlight as well as colors and image sharpness. After an image is optimized, the user has the option to easily compare the original and the newly created images in order to obtain a full visual record of the enhancement process prior to further processing. If additional manual intervention is required, the original image can be easily exported to third-party applications and re-imported into Amendo.

The new version of Amendo will be shown live at several upcoming shows and events, including the America East 2011, taking place in Hershey, PA, USA on March 14-16 and the Gulf Print & Pack in Dubai on March 14 - 15. The entire OneVision Team is looking forward to welcoming you to these shows.

OneVision's software is used by many of the world's leading publishers as well as commercial and digital printing companies in more than 60 countries.
