FOR THE COMMERCIAL AND DIGITAL
PRINTING INDUSTRY

PRECISION SOFTWARE SOLUTIONS
FOR PREMEDIA

WITH ONEVISION SOLUTIONS, GAIN EFFICIENCY
THROUGHOUT YOUR PREMEDIA WORKFLOW

THE PERFECT BLEND OF TRADITION AND TECHNOLOGY

Since 1994, printers and publishers all over the world have relied on premier software solutions from OneVision. Whether you are a global printer with thousands of employees in numerous locations or a small local printer with limited staff, you can utilize OneVision's state of the art software solutions to increase the efficiency of your production environment.

From file normalization, control, correction to real time editing, OneVision has set the standard for automating, streamlining and optimizing prepress processes. OneVision's solutions have made it possible to provide first-class service to your customers.

WE SUPPORT YOUR BUSINESS SUCCESS AND CAN GROW WITH YOUR DEMANDS

Growth and success requires continuous reflection and adaptation of processes. When it comes to making investment decisions, parameters like increasing customer expectations and focusing on the future goals of the company play an important role. Prepress and premedia are critical areas: your customers expect that all of their files, regardless of whether they were created by an amateur or professional, can be processed with perfection. In that context your specialization—classic commercial print, print-on-demand, photo books or high volume production—is irrelevant. All changes and evolutions in the market result in challenges which have to be reflected in your investment planning.

Our software solutions help you to live up to these challenges. Process automation is one of the key success factors. Not only can you get print ready files in seconds, but you can also automate the processes from file reception to the RIP. High volume production can be eased by file transfer scheduling, file name parsing or renaming functionality. To use JDF job tickets for auto-impositioning reduces network load and speeds up imposition processes.

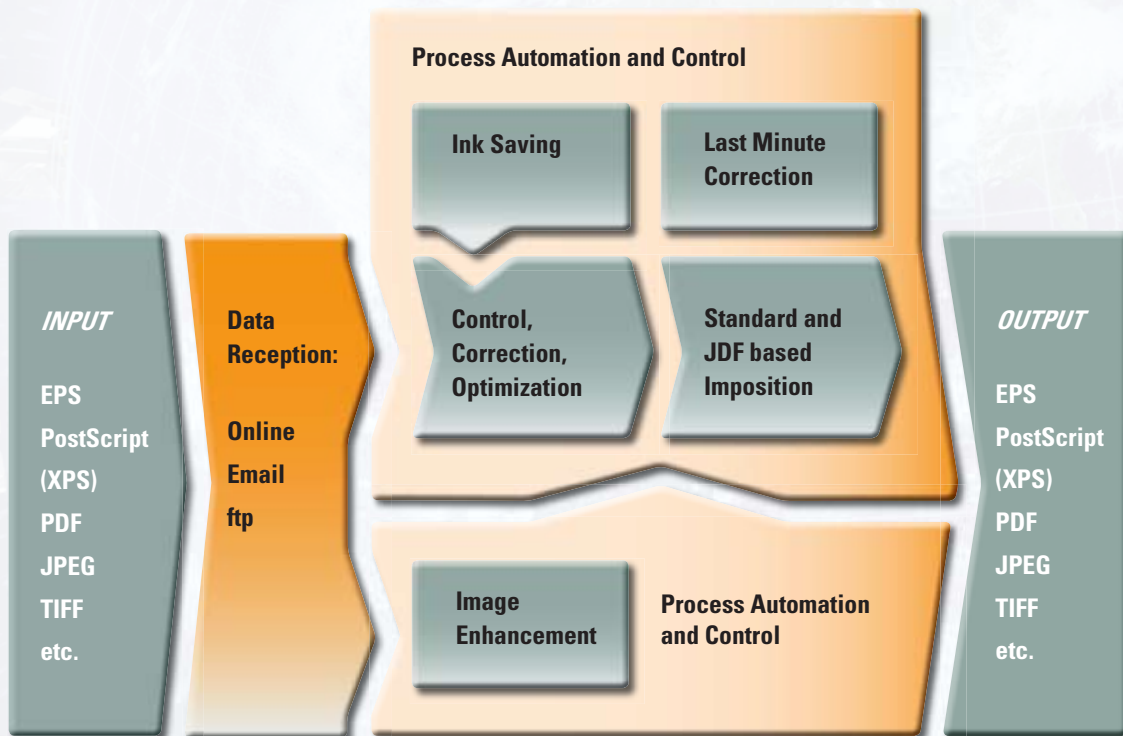

Discover OneVision's scalable software solutions which worldwide leading printing companies and publishers rely on every day to achieve high production quality and save money and time. Discover OneVision. On Paper. Online. On Time.

IMAGINE

Connecting with your customers 24/7

Managing and tracking your production files easily

Getting files from reception to print in no time at all

FILE LOGISTICS WHICH ADAPT TO COMPANY AND MARKET EVOLUTION

COMPREHENSIVE BACKBONE WITH MAXIMUM FLEXIBILITY, ACCESSIBILITY AND CONTROL

With OneVision solutions, receiving, tracking and coordinating production files through your workflow is easy and effortless. With our Web-based solutions, you can connect with your customers via the Internet or Intranet 24/7. The customer can even receive real-time online feedback about job status, including a soft proof of a production-ready file. Depending on your individual requirements, online approval can even be given within seconds.

Manage and automate every pre-press process including the communication process by guiding each job from design to delivery. With OneVision's solution you can automatically control all installed software, no matter whether it is a OneVision or another third party application used in the production process. And because the communication can be done via hotfolder, XML job tickets or JDFnet, external applications can easily be integrated into the workflow.

You diversify into different business areas, e.g. photo books? You grow, merge or partner with third parties? Don't worry, OneVision's file logistic solutions adapt to your needs and support the required level of automation.

Move files from anywhere to anywhere, ftp to LAN, detach email attachments or let your customer print files directly from common Windows or MAC OS X applications via the Internet or Intranet. Increase automation via detailed file transfer scheduling using software that supports your existing file naming conventions with file name parsing and renaming functionality.

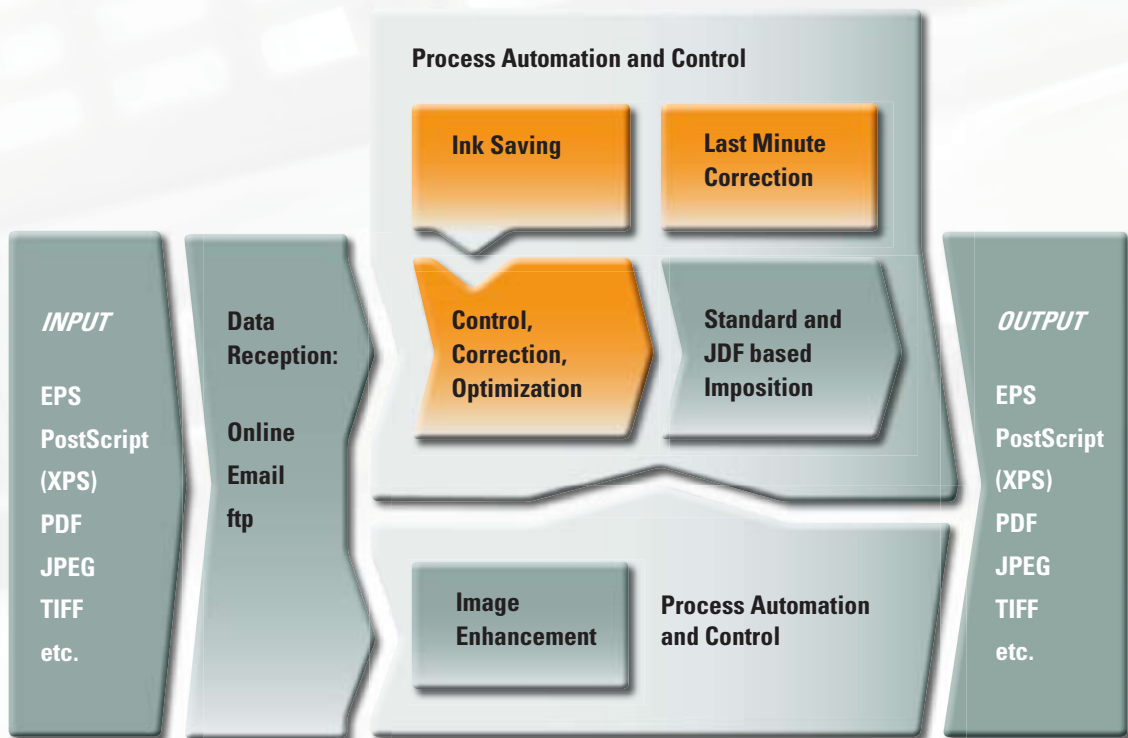

From receiving files from multiple sources to keeping your customers informed, OneVision's software can provide perfect print and online-ready files. Let OneVision's solutions help you manage and coordinate your production processes with ease.

GET PRINT READY FILES WITHIN SECONDS

SOLUTIONS FOR FILE NORMALIZING — A STRONG BRIDGE BETWEEN CLIENTS, PROGRAMS AND YOUR PRODUCTION ENVIRONMENT

OneVision's original core competence is to provide one of the world's leading automated software solutions for control, correction and optimization of files. With OneVision's solutions, you can automatically examine file contents, correct errors on the fly and receive a detailed report for each document. And if the volume increases, OneVision's balancing solutions make sure that production runs smoothly avoiding bottle necks.

Perhaps the most comprehensive tool for last minute editing of text, images, graphics and colors in production files, OneVision's editing solutions add flexibility which allows you to offer the best in customer service.

Go a step further and achieve significant savings in ink costs by in depth usage of OneVision's color management solutions. Automatically replace expensive chromatic color components (C, M, Y) with the less expensive black (K) components. Results are cost reduction, productivity increases and enhanced quality—all with an easy-to-use interface requiring no third party color expertise.

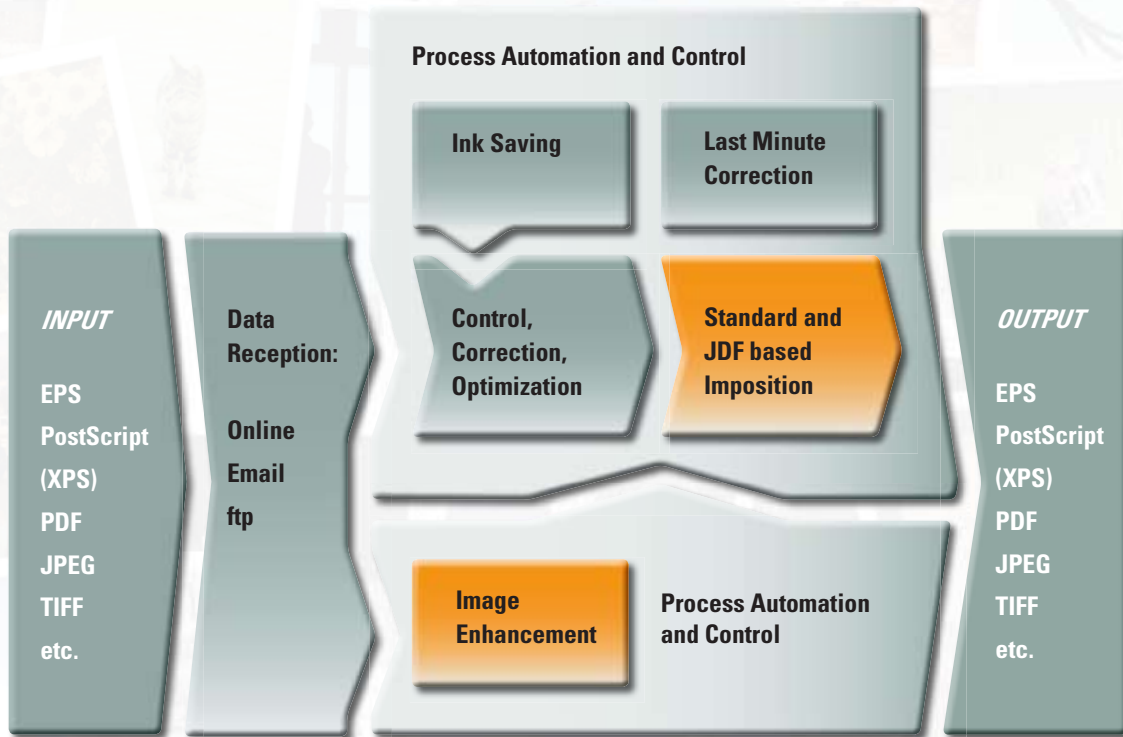

OneVision can also customize your perfect solution based on your individual requirements. Get quality control and automated document optimization that also integrates XML and JDF job ticket technologies for high volume properties with increased complexity. The job tickets are based on standard XML technology which facilitates the communication with job ticket processes and other XML-based systems. OneVision's Business Solutions team can create even more customization depending on your needs. Let us know what you need and OneVision will work with you to make it happen.

Achieving high speed JDF-based imposition
with reduced network load

Decreasing image processing time significantly

Enhancing amateur photos within seconds

THE POWER OF AUTOMATED IMPOSITION

GAIN EFFICIENCY THROUGH JDF BASED IMPOSITIONING

OneVision's powerful and fast imposition tools flawlessly arrange separated, composite and monochrome PDF pages for postpress. The JDF compliant solutions seamlessly adapt to workflows in print and media by offering multitude imposition schemes and printing combinations. Preparation can be reduced by importing templates as JDF or PJTF job tickets from other common imposition applications. Using the software solutions, fully imposed PDF flats can be imaged on any device supporting PDF input.

THE KEY TO YOUR SUCCESS: HIGH SPEED AND HIGH QUALITY

EXCITE YOUR CUSTOMERS WITH QUALITY OPTIMIZED PRINTOUTS OF THEIR PHOTOS

Pictures taken by an amateur photographer sometimes lack quality which can negatively influence your photo book business. Optimized printouts excite customers and increase their satisfaction, which is particularly important in growing and competitive segments. OneVision's image enhancement solution processes and improves images automatically. Brightness and contrasts, shadows and highlights—as well as colors—are enhanced. Sharpness is improved. What's more, the software analyzes color values of numerous common elements such as vegetation, sky and skin and modifies the colors according to human viewing patterns.

When additional manual intervention is desired, images can be easily exported to third-party applications or enhanced directly using OneVision's software. No matter whether the adjustment involves the color, color saturation, contrast in shadows and highlights, brightness, sharpening, scaling, manual cropping or rotation, OneVision's image enhancing solution offers an array of interactive options for image optimization.

GET THE MOST VALUE FROM YOUR ONEVISION SOFTWARE

STAY UP-TO-DATE AND SECURE YOUR INVESTMENT WITH ONEVISION'S SOFTWARE MAINTENANCE

OneVision is strongly committed to its customers and works to ensure that their software continues to create returns from the first day of purchase. We also understand that premedia technologies continuously advance. With this in mind, we continuously adapt our solutions according to the latest market and technological evolutions and requirements.

OneVision customers can benefit from these enhancements by entering into an annual Software Maintenance Agreement. This agreement offers our customers an extensive service package around their OneVision software.

Specifically, the maintenance agreement provides live customer service and help desk support, continuous updates and 24/7 access to the OneVision Online Customer Portal. Customers can receive as much help as needed, and any member of your staff can call for support.

Through our Customer Portal, you can get the latest service releases, and updates and manuals are always available to download. You will also receive automatic emails informing you of new software releases and updates.

Make sure that you secure your investment with OneVision's solutions and stay up-to-date—sign up for OneVision's Service and Maintenance Plan today!
