Give your processes
the decisive
automation boost

Efficient. Flexible. Proven.

OneVision Software has been providing tailor-made workflow solutions for 30 years. Our main goal is to help you achieve greater profitability and efficiency in your production processes. Our intelligent automation software is used around the clock by more than 3,000 print service providers, media companies, agencies and publishers worldwide.

The modular structure of the software enables individual configuration – tailored to your specific requirements. Sustainable print form creation (nesting, impositioning, etc.) ensures significant savings in printing material. Numerous integrations with hardware and software systems create a smooth production workflow that can be monitored quickly and transparently in real time thanks to job tracking.

Your benefits with the Wide Format Automation Suite

Managing Director

As a managing director, your goal is to make your company efficient and future-proof. OneVision's software can help you improve your KPIs and increase your profitability.

- ✓ Up to 100% automation for your production workflow
- ✓ More order capacity with the same team
- ✓ Higher profitability and increased margins
- ✓ Innovative software to address the shortage of skilled workers

Production Manager

Smooth processes and flawless products are your responsibility. With OneVision, you can effectively automate your production, reduce errors and increase your productivity.

- ✓ Up to 85% time savings thanks to faster file preparation
- ✓ Greater efficiency and production reliability with a concurrent increase in quality
- ✓ High data security and reliability

Workflow Manager

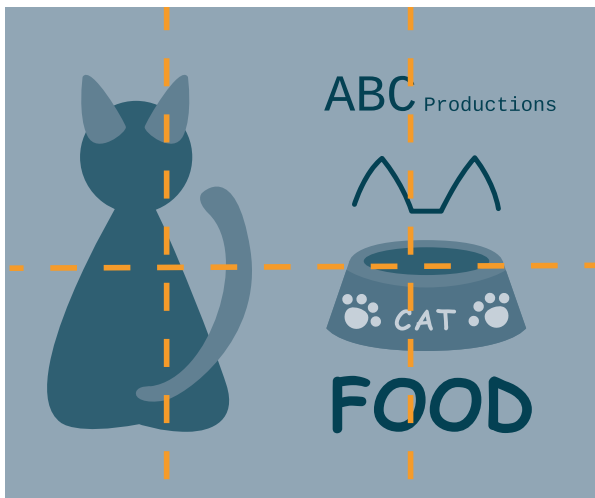

You keep production running. With OneVision's user-friendly solutions, you can create and control individual workflows and adapt them if required.

- ✓ Flexible and individual customization of the software, tailored to your requirements
- ✓ End-to-end workflow: connection of any machines and software systems
- ✓ High-quality service, regular updates, training, 24/7 support

Automated wide format printing with OneVision's software solutions

Oversized print file is tiled and paneled

Print file

Cut file

Integration

The software suite can be integrated with any system that outputs structured and consistent data such as XML (e.g. MIS /ERP solutions or web shops). Files can also be delivered and processed via FTP, web upload, email or flash drive.

File processing

Files are processed intelligently. This is done by information from the job ticket, by file attributes, or by defined rules.

File optimization

Print files are automatically checked by more than 130 criteria. Detected errors are automatically corrected and the file is optimized for the individual requirements of the wide format production. The software performs the following corrections, among others:

- Creation of bleed
- Correction of cut lines
- Trim to cutting dies

Production preparation

Tools – specifically tailored to the needs of wide format printers – optimally and automatically prepare the print files for production. Among others:

- Nesting/ganging
- Tiling and paneling
- Creation of hemstitches or eyelets

Printing & finishing

The software creates cut lines for finishing. This can be sent to the cutter as separate information. Optimized print files are transferred to the press.

CUSTOMER CASE

Increased efficiency and planning reliability through process automation at Kleinhempel GmbH

From billboards at construction sites to building wraps, from posters to large digital screens, from floor graphics to window advertisements – Kleinhempel GmbH offers the full range. The large format printer specializes in visual communication on a variety of materials.

Challenges

- 30 manual steps to check the print job and correct errors
- Manual division of the poster sheets into equal-sized panels using Adobe InDesign and Illustrator
- Eyelets and hemstitches are measured and added manually
- Prepress staff spends up to 90% of time on repetitive, non-revenue generating tasks
- Increasing cost pressures and a shrinking window for customer orders

Solutions

- Automated preflight (color management, add bleed, etc.). Errors are automatically detected and corrected
- Intelligent tiling of the panels and calculation of the mega-poster overlap
- Eyelet marks are automatically added to the print file according to the customer's specifications
- Automated creation of shipping labels for the end customer by using "Variable Data Printing" feature
- Complete process automation despite diverse machinery
