AI Bleed

Intelligent bleed generation

Every day, print providers receive customer files without sufficient bleed margins. Preparing these files manually slows down production and stops automated workflows in their tracks.

AI Bleed

- Analyzes the image to intelligently generate **seamless extensions**.
- Automatically delivers a **visually perfect, print-ready result**.

Edge Mirror

- Creates unnatural, distracting symmetry at the borders.
- Visually disrupts repetitive patterns and distinct objects.

Pixel Extension

- Causes harsh color banding from smeared pixels.
- Fails to create a professional, print-ready edge.

AI Bleed analyzes your image content to generate a visually perfect, print-ready bleed area that drives automated production.

Intelligent background extension

Seamlessly extends artwork outward by analyzing textures and patterns.

Preserve aspect ratios

Keeps the original image untouched.
No stretching or scaling.

AI-driven bleed generation

Set your required margin and let the AI generate the canvas instantly.

Trigger workflow automation

Instantly launch workflows, route jobs, or initiate quality checks.

KEY BENEFITS

Flawless edge extension

No visual distortions

Automated file preparation

Massive prepress time savings

Seamless workflow integration
