AI Extract

Intelligent background removal

Manual background removal and complex masking are time-consuming and lead to inconsistent quality.

AI Extract changes that. By connecting powerful AI models directly to your workflow, it automatically detects subjects and removes backgrounds flawlessly, delivering graphics ready for composition.

Extracted object with AI Extract

Original image

Extracted object with AI Extract

AI Extract does more than just erase pixels. It intelligently separates subjects from their backgrounds to deliver clean, transparent images that can directly enter your downstream image processing and media workflows.

Precise subject detection

Instantly recognizes people, products or objects.

Flawless edge masking

Handles complex structures like hair and fine lines, with absolute pixel-perfection.

Batch background removal

Processes entire folders or job queues of images simultaneously without a single click.

Trigger workflow automation

Saves files in transparent formats and routes them into downstream workflow steps, such as printing, finishing and more.

KEY BENEFITS

Instant background removal

Pixel-perfect selection quality

Fully automated image masking

Accelerated production speed

Local installation, no data transfer
