AI Queries

Get jobs moving faster – automatically!

Every day, production workflows receive order information in countless formats:

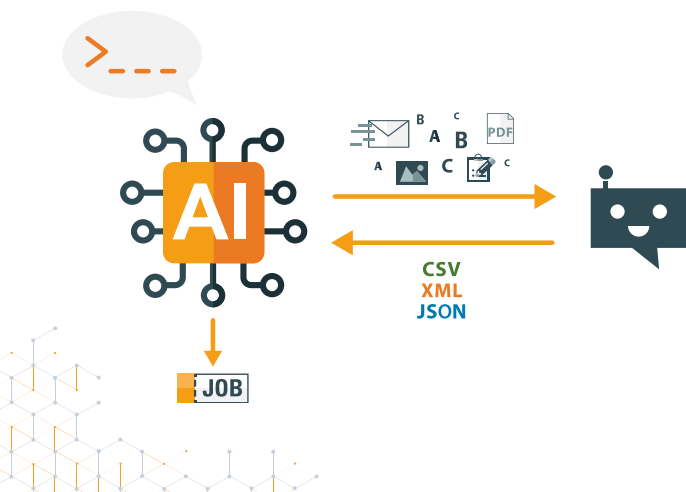

- Customer emails
- PDFs and scanned documents
- Comments and instructions
- Images and visual content
- Mixed or incomplete job information

While workflow automation relies on structured data, most incoming information is anything but structured.

As a result, teams spend valuable time reviewing, interpreting, and manually transferring information before production can begin.

AI Queries changes that.

By connecting powerful AI models directly to your workflow, AI Queries transforms unstructured content into structured information that can immediately trigger automated actions.

AIQueries does more than analyze content. It delivers workflow-ready results that can automatically drive production processes.

Extract information

Capture key details from images, documents, emails, and customer instructions.

Classify content

Identify products, objects, categories, or production-relevant attributes.

Generate structured data

Create XML, JSON, job tickets, metadata, or image descriptions.

Trigger automation

Launch workflows, route jobs, send notifications, or initiate quality checks.

KEY BENEFITS

Faster production

Less manual processing

Greater automation

Flexible AI-integration

Seamless workflow integration
