EVERY STATION YOU NEED
Configured once – Integrated forever

With **Stations**, you can define the parameters for each work step. Visualized production steps and a virtual, dynamic job sleeve ensure that every task is tracked accurately, whether digital or manual. Barcodes or Job-IDs prevent mix-ups and ensure fast production. The dashboard provides a clear overview of every station, including current backlogs, and allows you to mark jobs as "OK" or flag them for reprint or correction.

Built-in feedback: Employees can update statuses, attach photos, and report defects. The documentation of the audit trail includes information on when a task was performed by which user. The mobile app ensures that no information is delayed, even on the production floor. All of this results in **shorter throughput times, fewer errors, better quality, and a reliable overview of every order's status**.
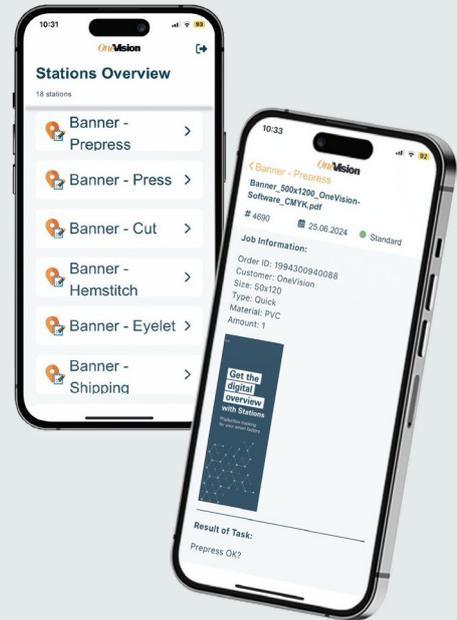

Your benefits with Stations

Managing Director

- Teams freed from routine checks can focus on core tasks
- Optimized ROI with error analysis and performance tracking
- Higher-level visibility across all departments
- Confident SLA compliance

Production Manager

- Full control through digital mapping of all stations
- Real-time status reports and audit trail for complete oversight
- Guided work steps that minimize mistakes
- Integrated quality checks at the right stage

Workflow Manager

- Digital integration of manual actions and analog stations
- Consistent information capture and feedback loops
- User-friendly interface for smooth operation
- Clear instructions to keep every process on track

Get The Digital Overview

Smart. Connected. Efficient.

You already have your MIS, webshop, and major production machines connected, but what about the offline processes? Manual work and analog machines without digital interfaces are often invisible in the production flow. That's where **OneVision Stations** comes in: Seamlessly integrating all work steps, allowing you to **digitally map, monitor, track, and trace** every production step in your factory.

Analog presses, sewing department, manual order picking, or machines without API interfaces, everything can be part of the workflow. Employees receive clear instructions at each station and status updates flow in real time. Jobs can be tracked and documented from start to finish, including quality checks with picture referencing and binning multiple customer orders for efficient processing. The result is a **smart factory where nothing is lost in the gaps between machines and manpower.**

Stations – Designed to deliver

Completely digitalizing your production doesn't mean abandoning what works — it means enhancing it. **With Stations, analog becomes digital**, manual steps become transparent, and your factory becomes more responsive and reliable.

Jobs are visible, statuses are clear, and errors are identified early on, resulting in improved throughput. You get the confidence that every order is being handled the right way, from the first station to the final check.
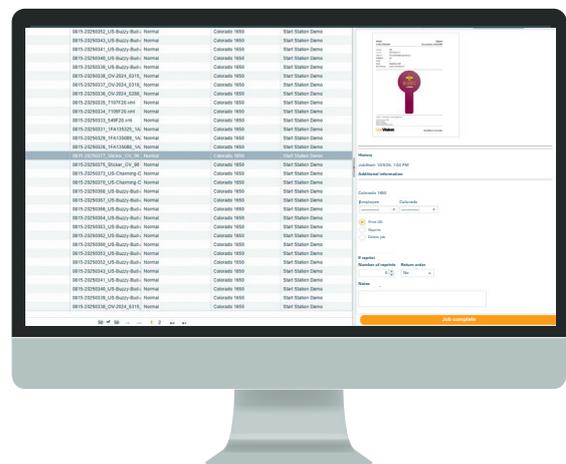

The world of OneVision Software
From prepress to production – and beyond

With the knowledge of our customers' requirements and our expertise in the printing industry, the foundation for the development of further workflow software was laid. Over the years, the **OneVision product range has grown to offer automation solutions for numerous printing and industry segments**, as well as software for quality validation, tracking, and tracing based on AI and computer vision.

Stations is a powerful solution on its own and the perfect complement to any OneVision software suite. By seamlessly integrating manual work steps and analog processes into the digital workflow, it closes the last remaining gaps in production.

| Wide format printing | Label printing | Commercial printing | Book printing | Publishing printing | In-plant printing | AI image processing |
