Give your processes
the decisive
automation boost

Efficient. Flexible. Proven.

OneVision Software has been providing tailor-made workflow solutions for 30 years. Our main goal is to help you achieve greater profitability and efficiency in your production processes. Our intelligent automation software is used around the clock by more than 3,000 print service providers, media companies, agencies and publishers worldwide.

The modular structure of the software enables individual configuration – tailored to your specific requirements. Sustainable print form creation (nesting, imposition, etc.) ensures significant savings in printing material. Numerous integrations with hardware and software systems create a smooth production workflow that can be monitored quickly and transparently in real time thanks to job tracking.

Your benefits with the Commercial Print Automation Suite

Managing Director

As a managing director, your goal is to make your company efficient and future-proof. OneVision's software can help you improve your KPIs and increase your profitability.

- ✓ Up to 100% automation for your production workflow
- ✓ More order capacity with the same team
- ✓ Higher profitability and increased margins
- ✓ Innovative software to address the shortage of skilled workers

Production Manager

Smooth processes and flawless products are your responsibility. With OneVision, you can effectively automate your production, reduce errors and increase your productivity.

- ✓ Up to 85% time savings thanks to faster file preparation
- ✓ Greater efficiency and production reliability with a concurrent increase in quality
- ✓ High data security and reliability

Workflow Manager

You keep production running. With OneVision's user-friendly solutions, you can create and control individual workflows and adapt them if required.

- ✓ Flexible and individual customization of the software, tailored to your requirements
- ✓ End-to-end workflow: connection of any machines and software systems
- ✓ High-quality service, regular updates, training, 24/7 support

Automated commercial printing with OneVision's software solutions

Automated imposition

Integration

The software suite can be connected with any system that outputs structured and consistent data like XML (e.g. MIS/ERP solutions or web shops). Files can also be delivered and processed via FTP, web upload, e-mail or flash drive.

Workflow management system

Automated, intelligent workflows running based on information from the job ticket, file attributes, or defined rules.

File optimization

Print files are automatically checked by more than 130 criteria. Detected errors are automatically corrected and the file is optimized for the individual requirements of the commercial print production. Among other things, the software performs the following functions:

- Creation of bleed and white/ varnish masks
- Correction and merging of cut lines
- Variable data printing

Automated imposition

The automatic and dynamic imposition enables fast creation of print forms/plates (1250 pages in 10 sec). Individual job properties such as quantity or format are taken into account, and additional sheet information, marks or barcodes are placed.

Printing & finishing

Direct integration with the production machines enables a smooth and automated interaction between software and presses/printer, embellishment devices as well as cutting and binding systems.

CUSTOMER CASE

Deliveries on time

through process automation at Cober Solutions

From business stationery to flyer, cards, posters, brochures, magazines and books – Cober is one of Canada’s leading commercial printers, including a large format division. The company handles in average 2000 orders per day with different products and requirements. For this, Cober relies on an efficient and on-time automated production workflow.

Challenges

- Manual file handling, file checking and optimization takes valuable time
- Incorrect files bogged down the entire workflow and resulted in extensive troubleshooting
- Different print files from different sources; often the specifications were not met
- Systems used were unreliable and often failed
- Staff needs a lot of time for imposition and print form creation

Solutions

- Automation of file management, preflight and impositioning
- Automated file corrections such as adding missing bleed, color management and much more ensure error-free production
- Print files from various sources (web shops, sales department, etc.) are standardized in a central system
- The software ensures the stability of the entire process, 24 h a day / 7 days a week
- Intelligent workflows handle the fluctuating numbers of jobs smooth and reliable
