

PRESS RELEASE

GREATER WORKFLOW FLEXIBILITY AND CONTROL – ONEVISION SOFTWARE ANNOUNCES THE SECOND SOFTWARE UPDATE IN 2025

Regensburg – OneVision Software brings the second software release of 2025 to the market. The 25.2 version features important updates, in the field of workflow control, file preparation, and image enhancement. As with every version, security reinforcement is a priority, and this time, two-factor authentication has become available to increase it.

Update Highlights

The update includes several optimizations that provide greater flexibility throughout the entire production process, such as:

- **Configurable module results:** The results of modules within job workflows can now be managed more flexibly. Therefore, their impact on the overall job results can also be handled more effectively. This provides more control over intentional errors. E.g., if a job workflow generated an error, but it is fixed within the workflow, the status of the job now can be set as OK.
- **Defined job filters:** Named filters make it easier for users to handle filters and jobs.
- **Improved and more customizable file preparation:** The Tiles & Panels module is now available, enabling an interactive tiling functionality. Various other tools have also been enhanced to be more adaptable to user needs, like inserting pages, placing barcodes, adding custom texts and marks, and improving support for cutters.
- **Amendo & Amendo AI:** Improved sky recognition and enhancement as well as skin color enhancement that takes skin complexion into account. A new option is also available for local contrast enhancement.

The update aims to give users more control over their individual jobs and to create an even more customizable environment that fits their specific workflow.

AI Billboard Validation – artwork checking for out-of-home (OOH) advertising

OneVision's brand new solution, AI Billboard Validation addresses the challenges of out-of-home campaigns. They involve complex processes and multiple stakeholders, all facing liability and costs without reliable feedback loops, leading to errors and inefficiencies.

The intelligent solution integrates real-time reporting, digital validation, and AI-driven quality control. Through the mobile app, photo reporting with geocoordinates and timestamps provides instant proof of posting and automated feedback, ensuring smooth communication and greater efficiency and accountability across campaigns.
