

PRESS RELEASE

ONEVISION SOFTWARE AT HUNKELER INNOVATIONDAYS 2025

Efficient automation for the digital printing and finishing industry

At the leading industry event for digital printing, inkjet and finishing, automation expert OneVision Software showcases innovative solutions for optimized workflows and connectivity in production processes.

Regensburg/Lucerne. From February 24 to 27, 2025, the Hunkeler Innovationdays in Lucerne will be all about forward-looking technologies for the printing and finishing industry. OneVision Software presents its modular automation solutions that seamlessly integrate production processes – from file preparation, printing and finishing to postpress. The aim is to make existing system landscapes more efficient, flexible and sustainable.

Streamlining production processes with automation software

Producing on-demand books, photo books, direct mailings, and other print products in digital and inkjet printing faces the challenge of combining top-quality printing with efficiency, cost-effectiveness, and sustainability. Successful providers rely on automation, innovative technologies, and thoughtful optimization of the entire value chain.

OneVision's Book Automation Suite enables end-to-end automation – from order entry to printing and finishing. It ensures smooth interaction between high-speed printers, MIS systems, and bookbinding equipment. The flexible software solution optimizes machine utilization, significantly reduces setup and process times, and increases productivity.

Renowned companies such as Photoweb, F&W, the international Storio Group, the U.S. Government Publishing Office and the Swiss print-on-demand producer Edubook already rely on OneVision's solutions.

End-to-end workflow automation and digital visibility

OneVision's software aligns perfectly with the event's "Connect" theme. Its structured data exchange enables integration into diverse system environments, creating a seamless workflow with various software and hardware systems such as Dataline, Canon, HP, Ricoh, Screen, Hunkeler, Horizon and many more.

OneVision's Stations software integrates manual tasks and analog machines into digital workflows. The solution minimizes errors with step-by-step instructions, provides real-time feedback, and improves tracking and service level agreements with status updates.

Workspace Production software enables dynamic grouping and processing of print jobs based on workflow and machine parameters using innovative batching functionality. This maximizes efficiency and press utilization.

OneVision Software invites visitors to discover new perspectives through automation at booth 428.

About OneVision Software AG

OneVision Software AG is an international software manufacturer for automation of production processes in the printing and publishing sectors as well as numerous other industry segments. For almost 30 years, the company's automation solutions have helped more than 3,000 customers worldwide to achieve greater profitability. As a globally active company, OneVision comprises entities in Germany, USA, Great Britain, France, Brazil, Singapore and India.
