

PRESS RELEASE

ONEVISION DEBUTS AT VISUAL IMPACT SYDNEY 2026 TO INTRODUCE NEXT-GEN AI SOLUTIONS FOR WIDE FORMAT PRINTING

Regensburg/Sydney – From **September 2–4, 2026**, **OneVision Software AG** will showcase its latest breakthroughs in wide format printing at Visual Impact Sydney 2026. The event will take place at the **Sydney Showground exhibition center** in Australia. At **booth G14**, the software provider will demonstrate how AI-powered applications and automated workflows are shaping the future of print production. Visitors will experience firsthand how these highly scalable, autonomous technologies can eliminate manual bottlenecks, maximize file preparation speed, and optimize efficiency for print service providers looking to future-proof their businesses.

Automating Modern Wide Format Workflows

Today's print providers must navigate complex workflows involving different substrates, formats, and finishing steps. Manual file handling in these workflows can result in costly prepress errors. Given rising costs and labor shortages, digital transformation is essential. OneVision's Wide Format Automation Suite addresses these challenges by standardizing and automating repetitive tasks such as preflighting, nesting, and cut line management. By eliminating manual touchpoints, the software enables print service providers to increase their throughput, reduce errors, and maintain profitability in diverse production environments.

AI-Powered Solutions

OneVision is expanding its technology portfolio with powerful, AI-engineered applications to solve critical bottlenecks in high-volume production. Scheduled for release as a major software update in early August, these innovations will be demonstrated live at the exhibition. The showcase will highlight the applications' autonomy and ability to operate on-premise while eliminating any dependency on text prompts.

- **AI Bleed** automatically extends image boundaries with pixel-perfect accuracy. It intelligently analyzes file structures to reconstruct missing areas, providing flawless edge extensions. Unlike traditional mirror-edge or pixel-smear methods, this tool does not produce visual distortions, unnatural symmetries, or harsh color banding.
- **AI Upscale Pro** is designed for next-generation image enlargement. It improves resolution and output size by reconstructing missing visual information from the original data, significantly enhancing image quality while preserving the original composition details. Additionally, the tool instantly converts low-resolution files into print-ready assets.
- **AI Extract** is designed for fully automated image clipping. It instantly removes backgrounds from entire job folders or queues and flawlessly handles complex shapes, fine details, and delicate edges. This eliminates the need for time-consuming manual masking and delivers clean cutouts that are ready for immediate layout composition.

Production Tracking with Stations

OneVision's Stations bridges the gap between file preparation and physical production by digitizing and connecting manual processing and finishing tasks. Each station acts as a smart workflow checkpoint, providing operators with precise, real-time job instructions on screen. Operators can confirm tasks, log feedback instantly, and document final production steps with photos. These features ensure absolute end-to-end transparency, minimize communication errors between departments, and enable seamless tracking of every print job from data entry to final delivery.

Meet OneVision at Visual Impact

At Visual Impact Sydney 2026, visitors can experience OneVision's automation and AI solutions firsthand. The team will demonstrate how these deep-learning applications integrate into production lines, with experts available to discuss workflow optimization strategies. Attendees are encouraged to book an appointment in advance to secure a dedicated consultation and discover how tailored automation can significantly increase efficiency and capacity.

About OneVision Software AG

OneVision Software AG is an international software manufacturer for automation of production processes in the printing and publishing sectors as well as numerous other industry segments. For more than 30 years, the company's automation solutions have helped more than 3,000 customers worldwide to achieve greater profitability. As a globally active company, the OneVision Group comprises entities in Germany, USA, Great Britain, France, Brazil, Singapore and India.
