

PRESS RELEASE

ONEVISION AT LABELEXPO 2023: A SMART FACTORY WITH POWERFUL AUTOMATION SOFTWARE

With the Label Automation Suite, automation expert OneVision offers modular software for efficient production processes. Label manufacturers can learn more about the solution at booth 8C12. Together with Konica Minolta Business Solutions Europe and MGI Digital Technology, an automated end-to-end production workflow will also be demonstrated in a live showcase at booth 8C21/22.

Regensburg/Brussels. Digital label printing continues to grow. More than a third of the total volume is already produced completely digitally or hybrid. In order to produce economically successful, agile and as sustainable as possible, digital and connected processes are necessary. Software manufacturer OneVision supports printing companies worldwide on their way to automation and will be showing how label manufacturers can automate their production in Brussels from September 11-14.

Flexible middleware for automated production processes

OneVision's Label Automation Suite acts as flexible middleware between job entry and job output to press or post press machines, automating the preparation of prepress and production files as well as workflows for any print product. All production steps are transparently mapped in the software, enabling smooth production without time loss.

Tools for automated file checking and optimization

Incoming print files are optimized according to defined rules and automatically prepared for printing, post press and finishing. Intelligent print form creation ensures maximum efficiency. Print files can be collected according to processing, substrate or other criteria, or even placed across jobs.

Seamless integration of systems

Thanks to structured data exchange, OneVision software can be easily integrated into the system landscape of printing companies. Front-end integrations to web shop, MIS, ERP and back-end integrations to DFE, RIP, presses as well as finishing equipment (laser die-cutters, cutting dies, coaters, etc.) ensure a demand-driven linking of print workflows.

To the smart factory with OneVision Automation

As the world's largest event for the label and packaging industry, Labelexpo Europe is one of the most important platforms for new innovations and technologies. At booth 8C12, visitors will gain insights into how system and process connectivity is creating a holistic end-to-end ecosystem for tomorrow's digital label printing.

About OneVision Software AG

OneVision Software AG is an international software manufacturer for automation of production processes in the printing and publishing sectors as well as numerous other industry segments. For almost 30 years, the company's automation solutions have helped more than 3,000 customers worldwide to achieve greater profitability. As a globally active company, the OneVision Group comprises entities in Germany, USA, Great Britain, France, Brazil, Singapore and India.
