

EFFICIENTLY AUTOMATE PDF WORKFLOWS

COMPANY PORTRAIT. OneVision Software AG develops powerful and flexible software solutions for the automation of the PDF workflow including prepress, RIP control and preparation of the finishing process. More than 3000 customers worldwide include printers, publishers and prepress companies.

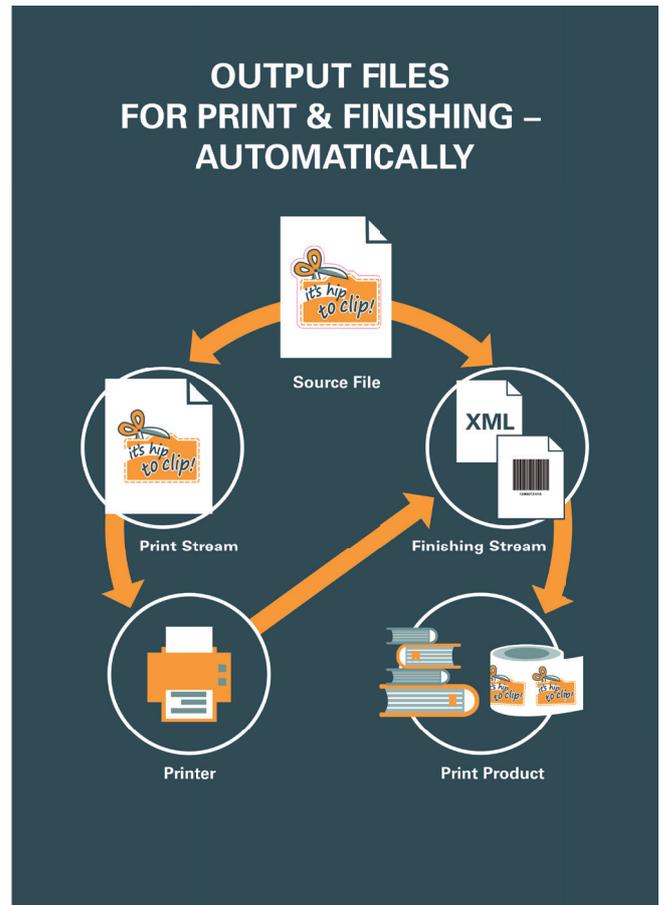

The aim is to help print service providers worldwide achieve higher quality in the production of their print products and also a more economical printing process. With its integrated industry solutions, the Automation Suites - specifically tailored to the various requirements of different print segments such as book, label and wide-format printing - OneVision provides its expertise to several print segments and meets the individual requirements of these industries.

Automation of processes and individual steps. The basis of these Automation Suites is a flexible workflow management system with which entire workflows can be individually set up and then files automatically processed. The corresponding software modules automate the individual steps in the process, such as pre-flighting, color management, image optimization, RIP, imposition of PDFs and inksaving. The result: error-free print data PDFs that reduce the load on the RIP and accelerate production.

This is based, among other things, on unique functions for filtering, sorting and routing files on the basis of metadata. Whether web or plate, offset or digital printing, screen or flexo printing - OneVision's software solutions can be used independently of the printing process and can be integrated into standard MIS, editorial and advertising systems.

As a result, the PDF workflow from MIS to DFE can be mapped, digitized and efficiently automated. Well-known global players in their industry rely on OneVision's expertise and appreciate the advantages they gain from working with the software company: they are primarily concerned with factors such as time savings, cost reduction and highest print quality.

The top priority is the customer relationship. Customer success is the driving force. The goal is for customers worldwide to successfully work with OneVision's software solutions and to benefit from the increased quality, the higher degree of automation and the resulting reduction in time and costs.

OneVision's experts maintain a partnership exchange with many customers, which enables them to identify customer and market requirements early on and make them the basis for software development.
